

Be a part of Oregon's botanical legacy

Sponsor a section of *Flora of Oregon*!

The three-volume *Flora of Oregon* represents the first floristic work for the state since 1961! Volumes 1 and 2 are published, and your support will help complete the final volume of this landmark series. The *Flora of Oregon* is the work of the OregonFlora program—a grass roots effort that has provided plant information to naturalists, land managers, educators, and gardeners since 1994. OregonFlora is based in the Dept. of Botany & Plant Pathology at Oregon State University. All salaries and direct expenses for our program come through grants and charitable donations.

A flora is the primary reference manual for determining scientific names of plants. It also provides important context for the many ways that plants impact our lives. Through its website (oregonflora.org), plant identification app, and the *Flora* books, OregonFlora is the “go to” source for the most current information about Oregon's native and naturalized flora.

Help create a botanical legacy

Don't miss out on this opportunity to be a part of the team that completes the *Flora of Oregon* by sponsoring a portion of the content. Show your support, or offer a tribute to a loved one, a mentor, or a friend by helping fund any of the following:

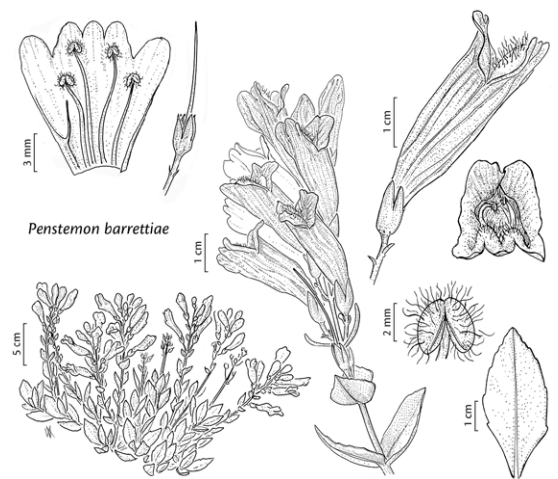

- Illustration
- Floristic treatment
- Front Chapter
- General support

Acknowledgment of your generous support will be published in the front pages of Volume 3.

Let's complete the *Flora of Oregon*!

Sponsor the research, data management, writing, and artistry that are necessary to produce the final volume of the *Flora*. Volume 3 will contain floristic treatments of 1,480 species, subspecies, and varieties (taxa) of dicots in plant families Garryaceae–Zygophyllaceae. Approximately 625 of these taxa will also be illustrated. The list below shows taxa needing sponsorship for floristic treatments and for illustrations.

Two front chapters will be included in Volume 3: one exploring how Indigenous peoples of the region have shaped plant communities through centuries of cultural management and one discussing the impacts of climate change on Oregon's plant diversity. Both are enriched with color photographs and supporting appendices.

Volume 3 will include the penstemons, including the rare taxon *Penstemon barrettiae*. This genus is in Plantaginaceae, the Plantain family, one the five families that formerly comprised Scrophulariaceae (Figwort family). Illustration by John Myers.

Yes—include my name in Volume 3 of the *Flora of Oregon* as a proud sponsor of these sections:

Front chapter topic (\$400+ each; check your selection):

☐ climate change ☐ ethnobotany = \$ _____

Illustration (\$250 each; plant habit with 1–3 details. Select available taxa from the list below):

_____ (plant taxon/taxa sponsored) = \$ _____

Floristic treatment (\$135/taxon; identification key, description, maps, and discussion. Select any taxon from the list below)

_____ (plant taxon/taxa sponsored): = \$ _____

General support of OregonFlora = \$ _____

TOTAL = \$ _____

Person(s), group(s), or organization(s) to be honored: _____

Let us know which sections you are sponsoring using either of these methods:

- (1) USPS mail us your selections along with a check made payable to Agricultural Research Foundation (include "OregonFlora" on the memo line) to:

OregonFlora
c/o Agricultural Research Fdn.
1600 SW Western Blvd Ste 320
Corvallis, OR 97333

- (2) Email us your selections at info@oregonflora.org and make your payment online [here](#).
Adding your sponsorship choices to the PayPal notes section is also appreciated.
